

Jouka Ball Valves for vacuum applications in the food industry

Jouka ball valves offer vacuum-optimized solutions designed specifically for food industry applications.

Our specialized valves ensure efficient and reliable vacuum performance, providing exceptional value to our customers.

Valve sizes: DN50, DN100, DN125, DN150
Material AISI304L, AISI316L

Special features for food industry vacuum valves:

- 1/2" flushing/rinsing interface to clean the valve body internally
- All valves are stainless steel
- Actuator and limit switch option
- Welded or flanged joints
- Filler ball seats to prevent particles inside the valve body
- Nitrogen-tested valves for special vacuum requirements

The valve is designed so that there are no pockets where the medium could stick.

Consult our experts for ideal valve solutions in vacuum applications within the food industry. Benefit from our extensive expertise and decades of successful references.

Jouka – valve expertise for 60 years!
